December 18th, 2024

Refurbishment of the apron at Hahn Airport completed

Successful modernization project at TRIWO Hahn Airport: Apron A, an area of 2.5 hectares, has now been completely renovated. The area offers space for a total of six new parking positions, for example for Boeing 737 or A321 aircraft.

The new, robust concrete surface has a service life of 15 to 20 years and ensures safe and efficient flight operations. "The renovation of apron A is an important step towards modernization. It enables further growth of our airport and thus further strengthens our position as an attractive location for air traffic," says Ruediger Franke, Managing Director of TRIWO Hahn Airport.

Passengers and aircraft can now be handled via apron A again, which is an advantage for travelers at Hahn Airport: they benefit from even shorter distances to the aircraft.

The construction work had become necessary because the old concrete had burst open and cracks had formed. As a result, Hahn Airport was no longer able to use the area. The modernization measures were carried out by companies from the region. The work had no impact on flight operations.
